

Naming and Naming Conventions for JavaScript Variables

Same case is of variables. Variable name must be easily understandable like

var myNumber = 123; instead of **var my123 = 123;**

Variables are written in **camel case (first pet then head)**.

Example:

```
myName = 'Muhammad Ahmad';
```

```
my_phone = "042576979";
```

```
userScoreFinal = 12;
```
