

Backend Development

Full Stack = Front-End + Back-End

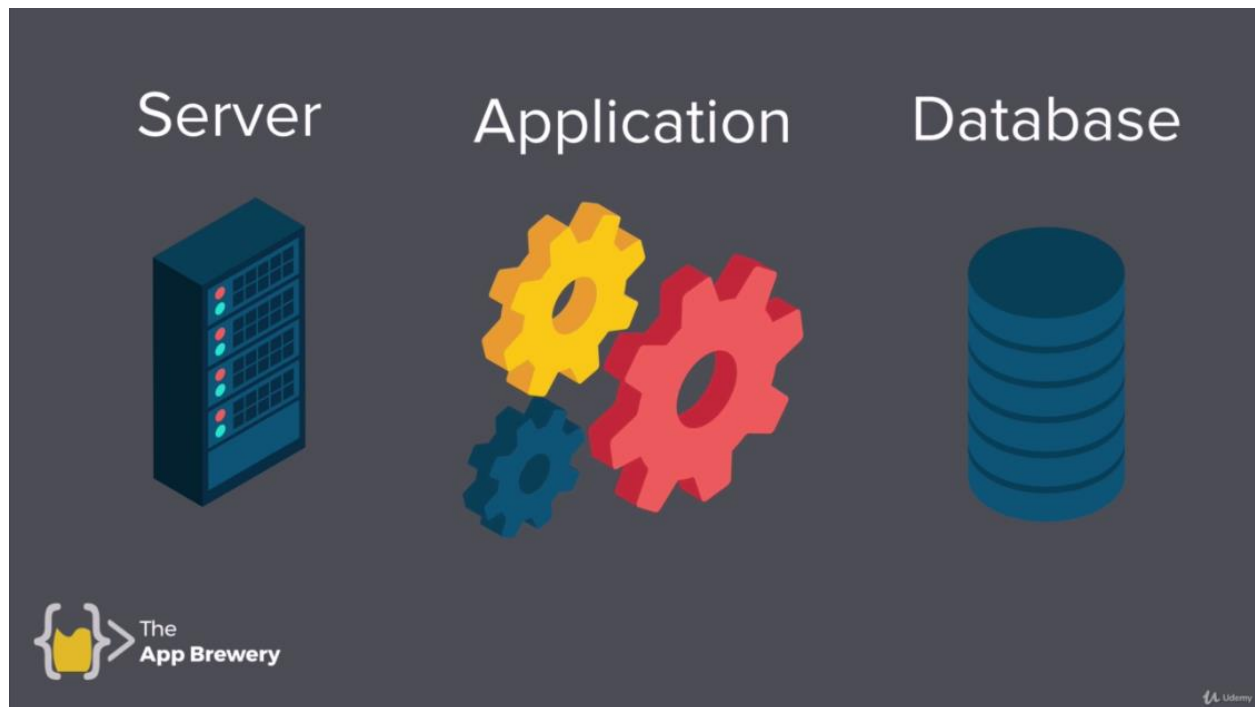

What Exactly is the Backend?

A server is a **computer program or device that provides a service to another computer program and its user, also known as the client.**

Like CSS, JS, HTML

Database:

- Stores data

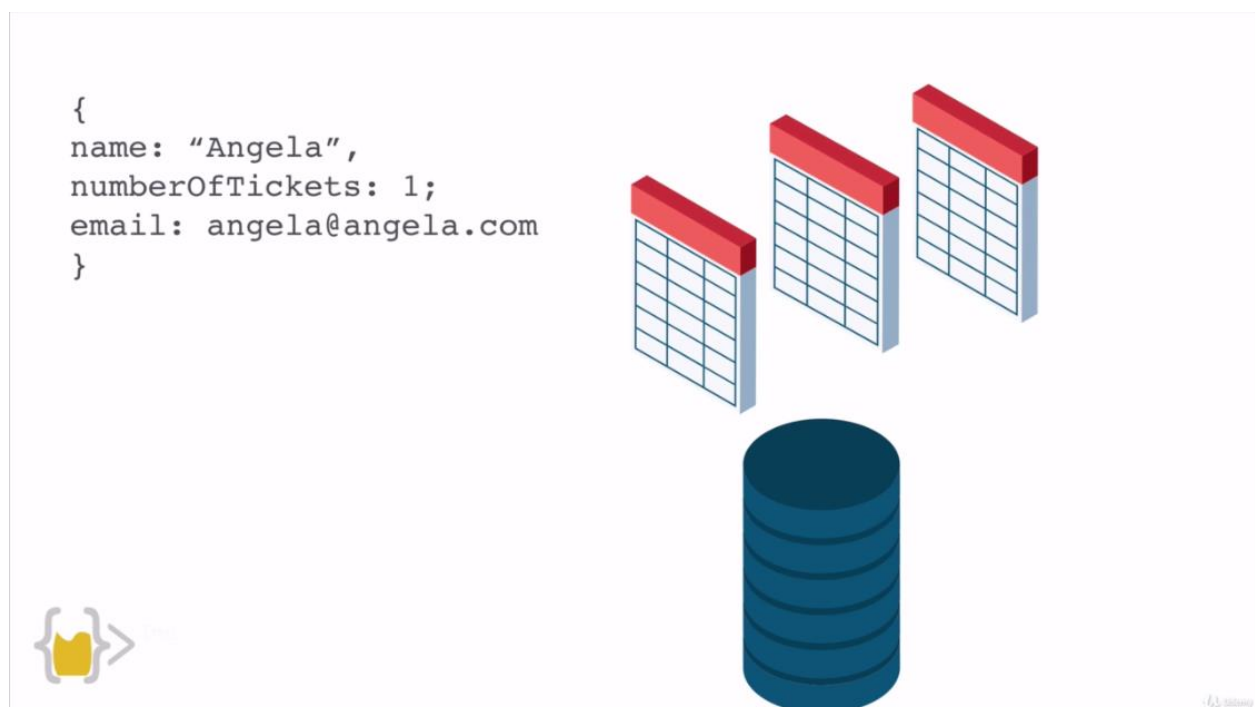

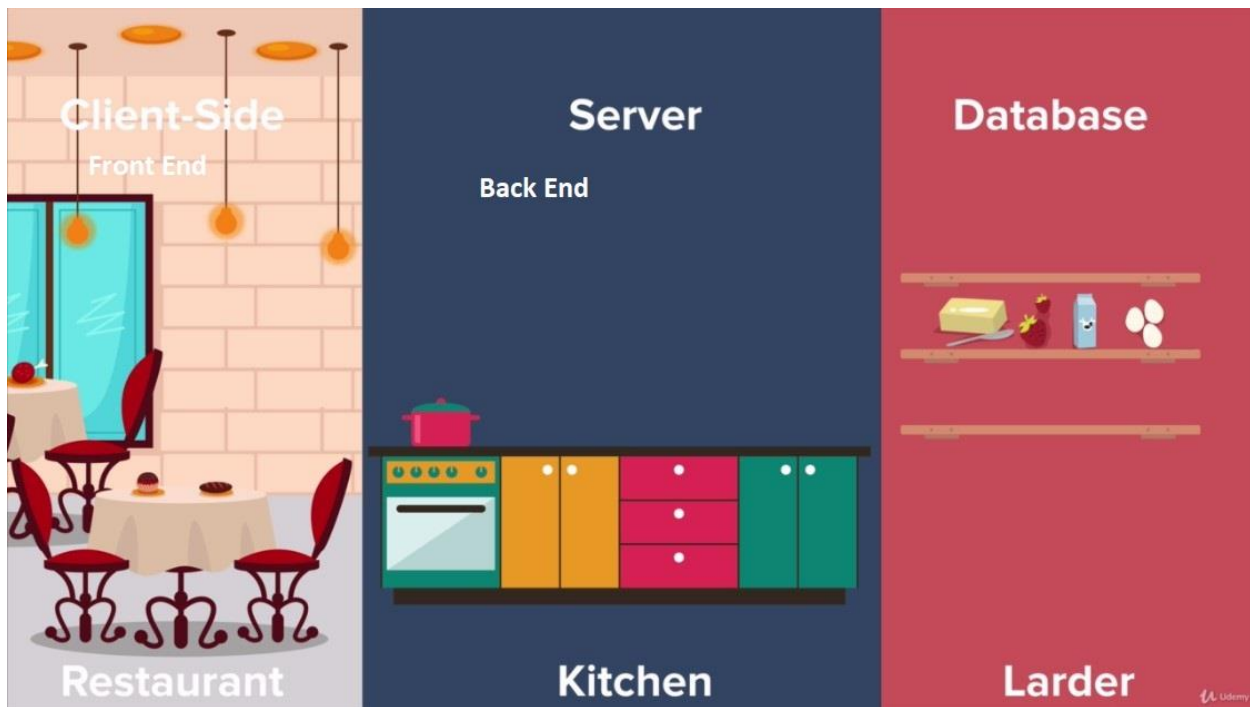

Applications:

- Making payments
- Calculating flight prices

Let's look at the Eventbrite Web-Application

<https://www.eventbrite.com>

On back end, there's a lot of technologies like

No JS runs on JavaScript. Move on **node JS**
