

# JAVASCRIPT ALERTS ADDING BEHAVIORS TO WEBSITE

Open browser inspect by **ctrl+shift+I** and go to console and write alerts like `alert("Hello");`

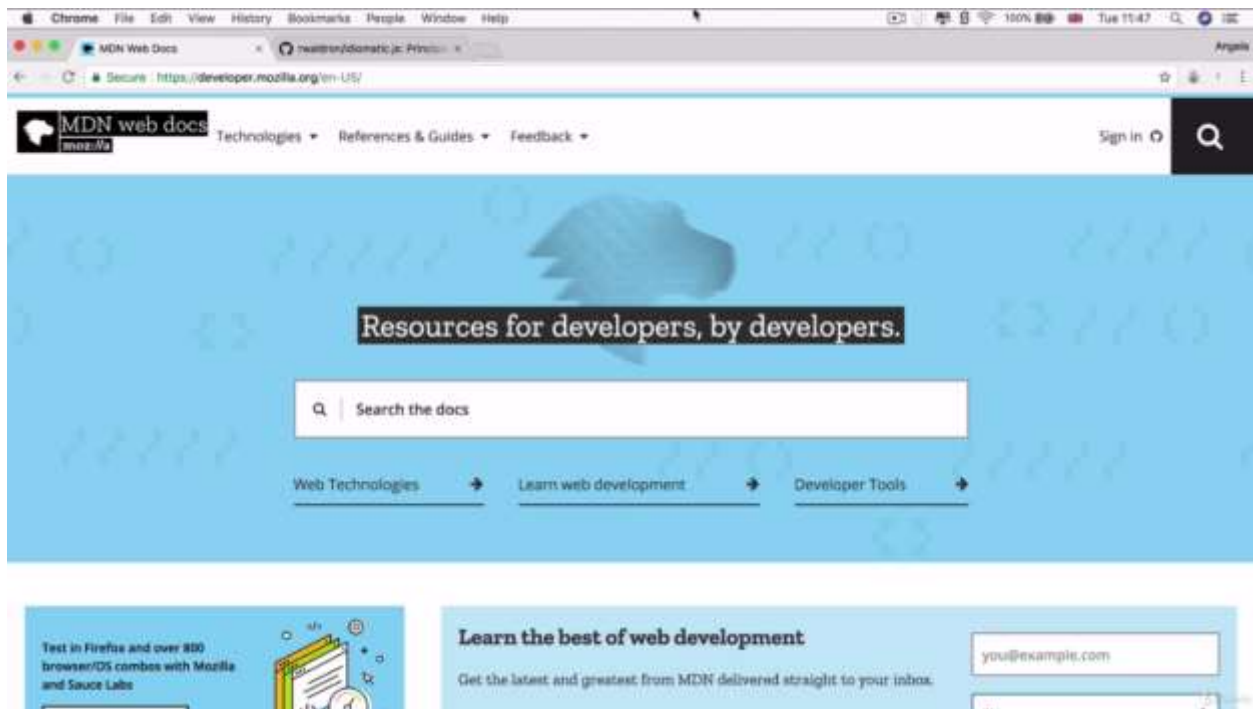

Open developer tool by pressing **ctrl+shift+j**

And see messages like

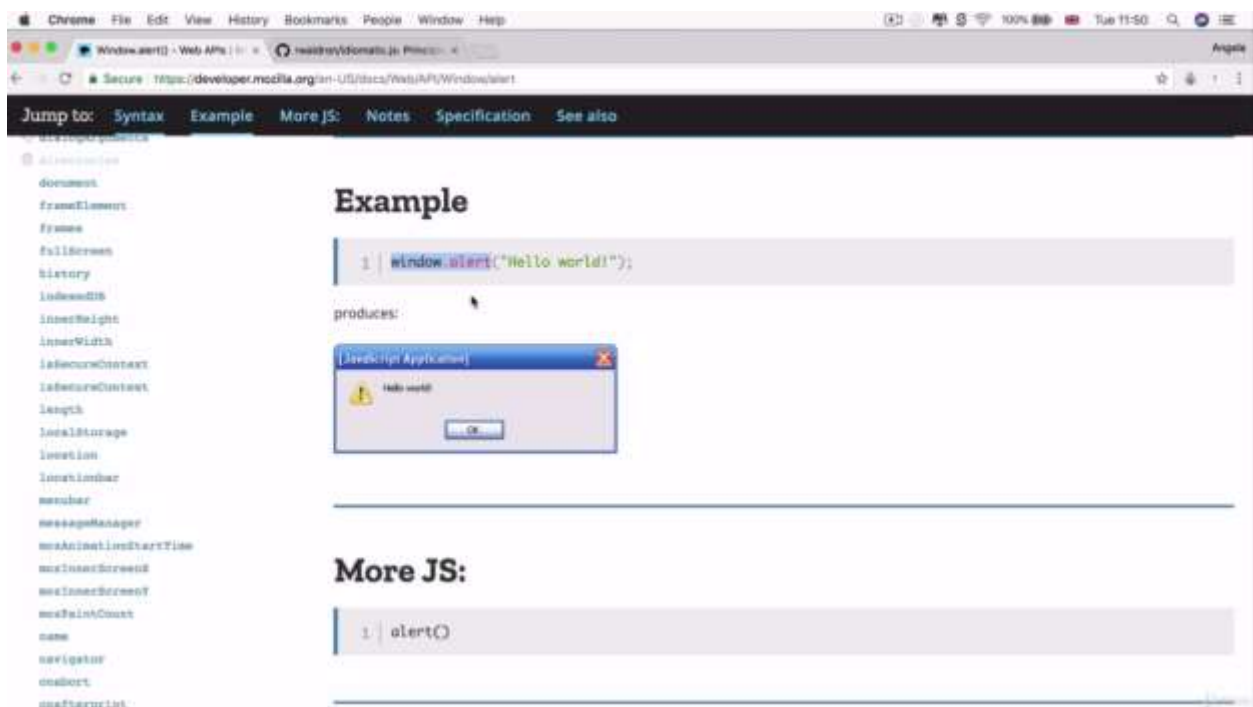

Shift+Enter to add two alerts like **“Hello” “World!”**

Above errors are due to offline (no internet). See data types like **number, string, function etc.**

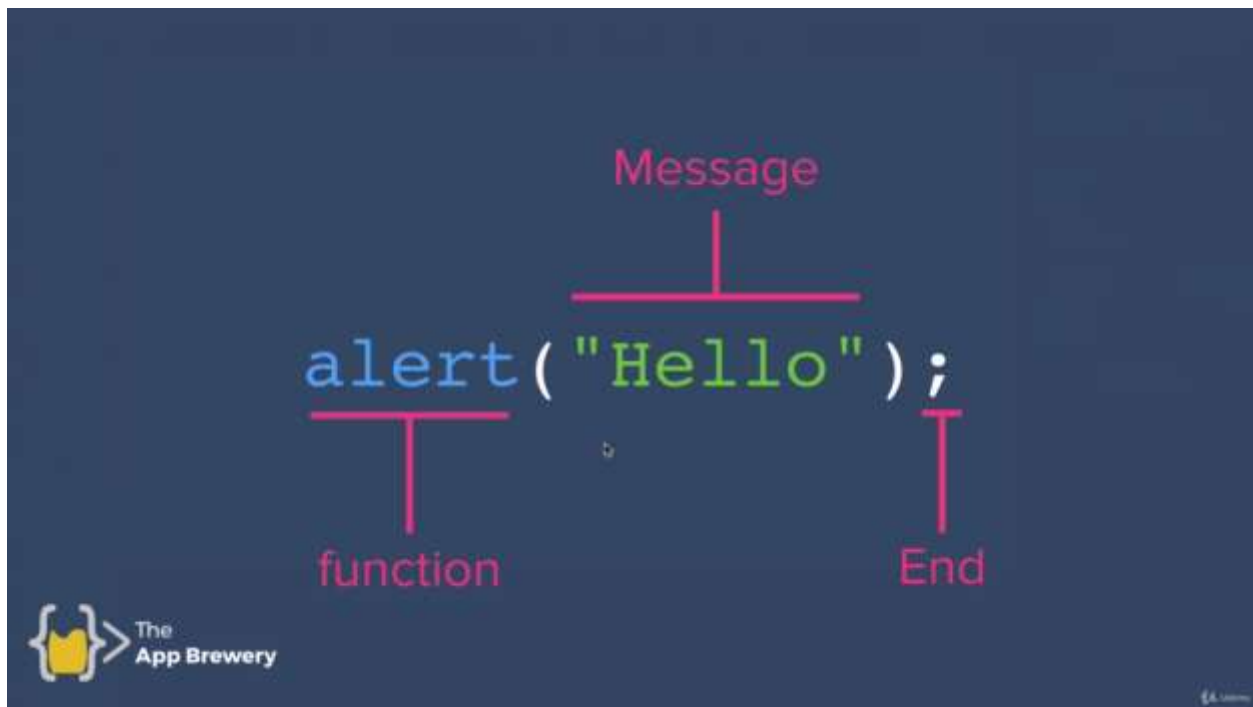

Open this website and explore things.

Also open below website.

<http://developer.mozilla.org/en-US/docs/Web/window/alert>

Alerts Syntax:

```
<function><message>end
```

```
alert("String");
```

**Note:** strings are written in single/double strings.

`alert("Hello");` It is like a say **"Hello"**. as we use in English sentence.
