

# ***UNDERSTANDING THE COMMAND LINE. LONG LIVE THE COMMAND LINE!***

Kernel is actual program. Shell computing first as the user interface.

Bash shell

# Why Use the Command Line?

Brought to you by  
London App Brewery 

It's very easier and faster to do a lot of really common things. Using command line we can show unnecessary libraries/files that are hidden by default in **macos** as well as in **apple**.

## Command Line Directories

`cd..` //change directory

`cd users..` //set user directory

`mkdir .Secrets` //Unhide macos secrets

Let's create folder using hyper directories

`mkdir Music` //mkdir means making directory
