

String Lengths and Retrieving the Number of Characters

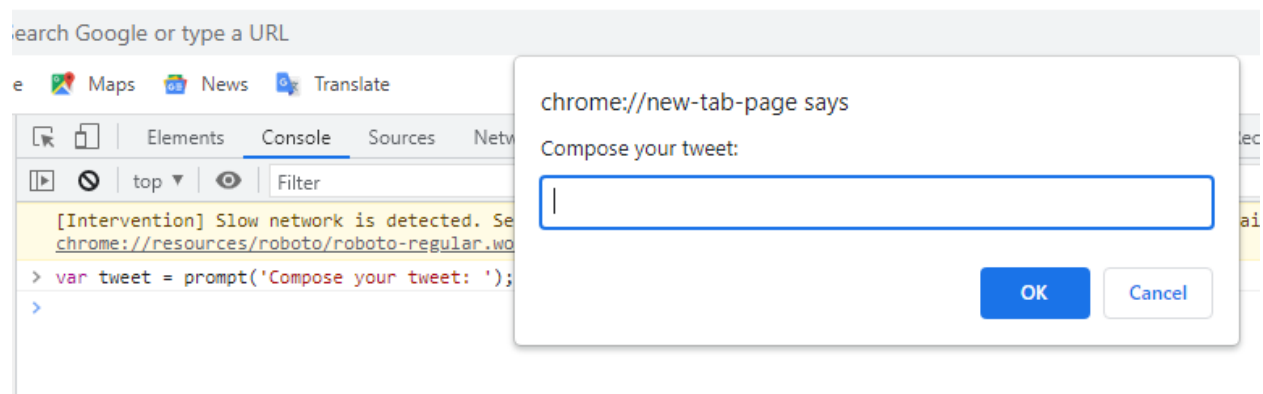

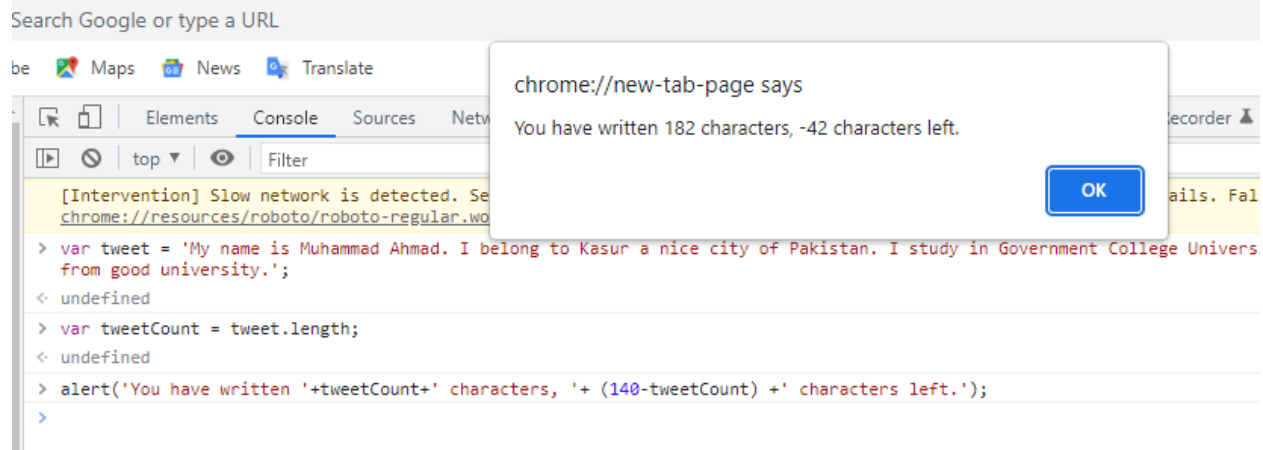

String length = no of characters in a string.

Space is also a character.

<https://charactercounter.com/twitter>

My name is Muhammad Ahmad. I belong to Kasur a nice city of Pakistan. I study in Government College University Lahore, Pakistan. I proud to myself for educating from one of the best universities in the world.

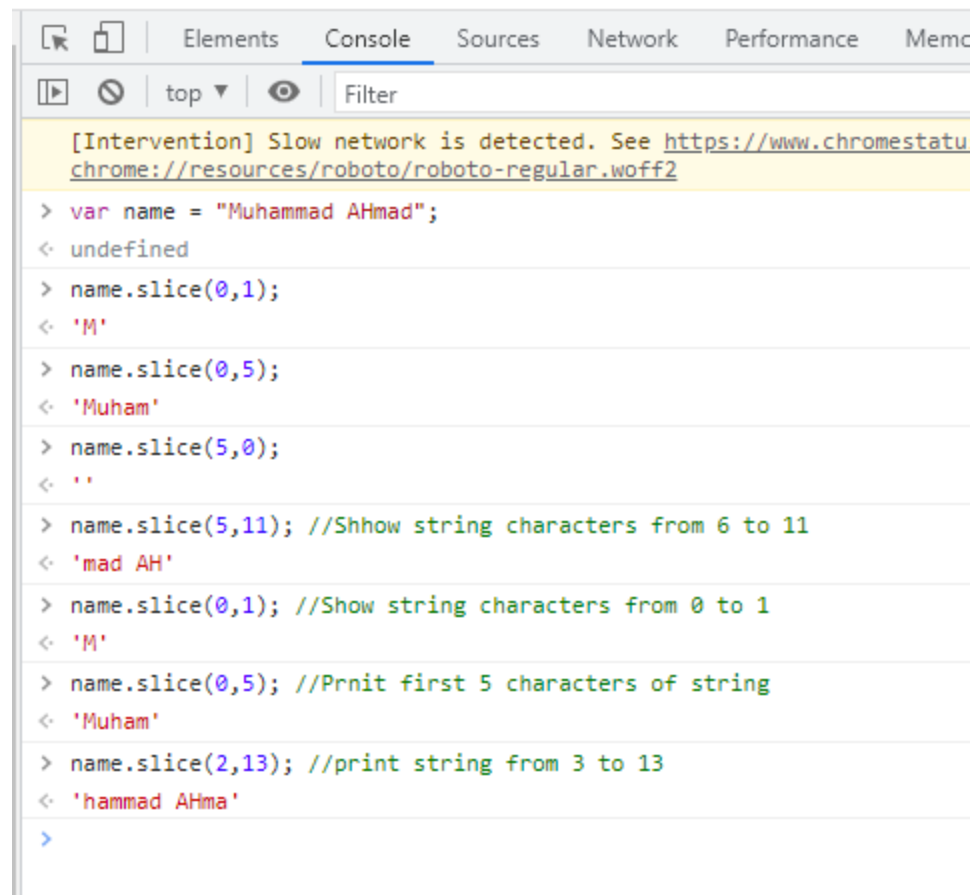

If you don't compose your tweet then run tweet.length command then you will found errors.

chrome://new-tab-page says

My name is Muhammad Ahmad. I belong to Kasur a nice city of Pakistan. I study in Government College University Lahore, Pakistan. I proud to

OK

This shows tweet of length 0 to 140 characters.

But real tweet length is 182.

My name is Muhammad Ahmad. I belong to Kasur a nice city of Pakistan. I study in Government College University Lahore, Pakistan. I proud to myself for educating from good university.
