

Manipulating and Changing Styles of HTML Elements with JavaScript

Change properties using JS instead of CSS.

https://www.w3schools.com/jsref/dom_obj_style.asp

In JS properties are changes in strings but in CSS we only change values

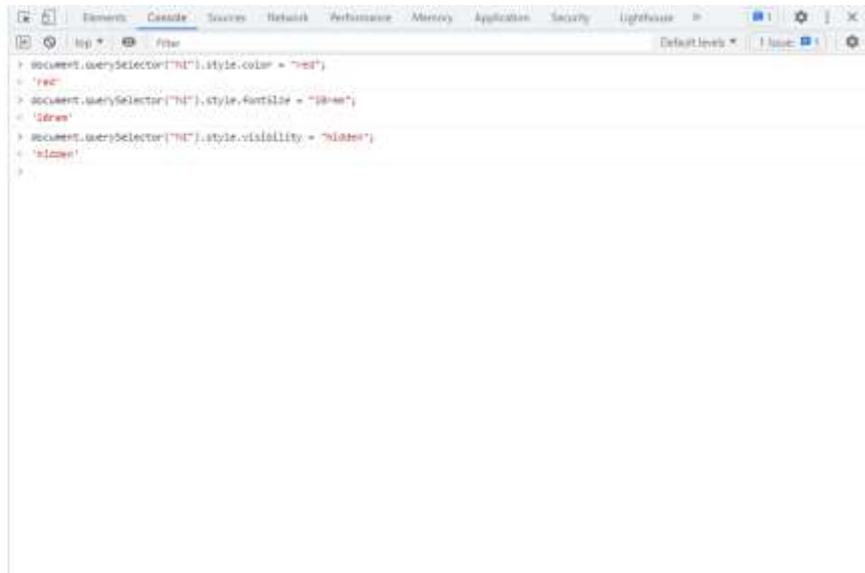

Like:

In CSS

```
h1{  
color:red;  
}
```

In JS

`document.querySelector("h1").style.color = "red";` //red is written in strings.

☐ Click Me

- [Google](#)
- [Second](#)
- [Third](#)

```
> document.querySelector("h1").style.color = "red";
< 'red'

> document.querySelector("h1").style.fontSize = "10rem";
< '10rem'

> document.querySelector("h1").style.visibility = "hidden";
< 'hidden'

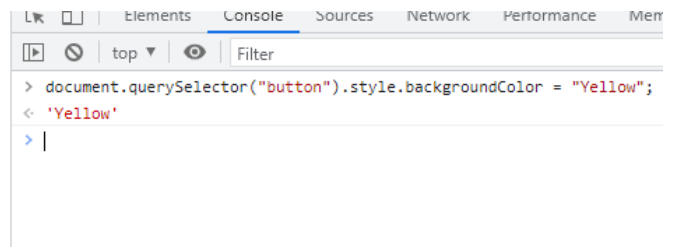

>
```

Let's change button background color.

Hello
