Atom Shortcuts

General

Some general keyboard shortcuts that I use frequently.

Command	macOS	Windows	Linux	Description
Preferences/Settings	`cmd,`	`ctrl,`	`ctrl,`	Opens the Preferences/Settings view
Command Palette	`shiftcmdp`	`shiftctrlp`	`ctrlshiftp`	Opens & closes the command palette

Open File (Fuzzy)	`cmdp`
	or
	`cmdt`
		`ctrlp`
		or
		`ctrlt`
			`ctrlp`
			or
			`ctrlt`
				Opens the Fuzzy Finder palette in which you can search and open files

Browse Open Files	`cmdb`	`ctrlb`	`ctrlb`	Browse tabs within the window
Previous Tab	`altcmdleft`	`ctrlpageup`	`ctrlpageup`	Cycles left through open tabs (in the active pane)
Next Tab	`altcmdright`	`ctrlpagedown`	`ctrlpagedown`	Cycles right through open tabs (in the active page)
Grammar Selector	`ctrlshiftl`	`ctrlshiftl`	`ctrlshiftl`	Selects the language the file is in
Markdown Preview	`ctrlshiftm`	`ctrlshiftm`	`ctrlshiftm`	Previews the file in the Markdown format
Key Binding Resolver	`cmd.`	`ctrl.`	`ctrl.`	Shows what keybindings the pressed key combination resolves to

Command	macOS	Windows	Linux	Description
Toggle Tree View	`cmdk cmdb` or `cmd\`	`ctrlk ctrlb` or `ctrl\`	`ctrlk ctrlb` or `ctrl\`	Toggles Atom's file Tree View
Reload Atom	`ctrlaltcmdl`	`altctrlr`	`altctrlr`	Reloads the Editor
Open Link	`ctrlshifto`			Opens up a HTTP or HTTPS link
Toggle Developer Tools	`altcmdi`	`ctrlalti`	`ctrlshifti`	Opens up the Chrome Developer Tools/Console
Show Available Snippets	`altshifts`	`altshifts`	`altshifts`	Shows the snippets available to Atom

Window Management

Command	macOS	Windows	Linux	Description
New File	`cmdn`	`ctrln`	`ctrln`	Opens an empty file in a new tab
New Window	`shiftcmdn`	`ctrlshiftn`	`ctrlshiftn`	Opens a new editor window
Open	`cmdo`	`ctrlo`	`ctrlo`	Shows the *Open File* dialog, which lets you select a file to open in the editor
Open Folder	`cmdshifto`	`ctrlshifto`	`ctrlshifto`	Shows the *Open Folder* dialog, which lets you select a folder to add to the editor's Tree View
Save	`cmds`	`ctrls`	`ctrls`	Saves the currently active file

Save As	shiftcmds	ctrlshifts	ctrlshifts	Saves the currently active file under a different name
Save All	altcmds			Saves all changed files
Close Tab	cmdw	ctrlw	ctrlw	Closes the currently active tab
Close Window	shiftcmdw	ctrlshiftw	ctrlshiftw	Closes the currently active editor window
Split Window	cmdk↑/↓/←/→	ctrlk↑/↓/←/→	ctrlk↑/↓/←/→	Split the currently active tab in one of the four directions
Focus Pane	cmdkcmd↑/↓/←/→	ctrlkctrl↑/↓/←/→	ctrlkctrl↑/↓/←/→	Move the focus to the pane in one of the four directions
Toggle full screen	ctrlcmdf	F11	F11	Toggle full screen window

Editing

Command	macOS	Windows	Linux	Description
Duplicate Lines	shiftcmdd	ctrlshiftd	ctrlshiftd	Duplicates the line of the current cursor position and creates a new line under it with the same contents
Delete Line	ctrlshiftk	ctrlshiftk	ctrlshiftk	Deletes the current line

Move Line Up	ctrlcmdup	ctrlup	ctrlup	Moves the contents of the current cursor position up one line. If there is a line above with content, the current lines content will swap with the one above it.
Move Line Down	ctrlcmddown	ctrldown	ctrldown	Moves the contents of the current cursor position down one line. If there is a line below with content, the line's content will swap with the one below it.
Find/Replace	cmdf	ctrlf	ctrlf	Opens up the Find/Replace panel
Find Next	cmdg	F3	F3	Toggles forward through the results of the current buffer in the

				file while the Find/Replace panel is active
Find Previous	shiftcmdg	shiftF3	shiftF3	Toggles backward through the results of the current buffer in the file while the Find/Replace panel is active
Find in Project	shiftcmdf	ctrlshiftf	ctrlshiftf	Opens the Find in Project Panel
Go To Line	ctrlg	ctrlg	ctrlg	Opens the Go To Line panel
Go To Matching Bracket	ctrlm	ctrlm	ctrlm	The cursor goes to the matching top bracket that the cursor is ecapsulated in
Select Line	cmdl	ctrll	ctrll	Selects the entire line the cursor's current position is in
Toggle Comment	cmd/	ctrl/	ctrl/	Toggles the selected text

				into a comment of the current grammar
Column Selection	`ctrlshift↑/↓`	`ctrlalt↑/↓`	`shiftalt↑/↓`	Allows to select multiple rows, where the same edit will be applied
Select Same Words	`cmdd`	`ctrld`	`ctrld`	If you select a word, and then hit the key combo for this command, Atom will select the next same word for you. Then you can either type directly (which will replace the old words) or use left or right arrow to append things.
Undo Selection	`cmdu`	`ctrlu`	`ctrlu`	This undoes the previous selection, like from

				Select Same Words.
Select All The Same Words At Once	`cmdctrlg`	`altf3`	`altf3`	This shortcut is similar to `cmdd`/`ctrld` but it selects all the matching words at once.
Show Symbols Palette	`cmdr`	`ctrlr`	`ctrlr`	This shortcuts opens a palette that lists all the symbols (or functions) in your current file allowing you to fuzzy search and jump lines.
Show auto-completions	`ctrlspace`	`ctrlspace`	`ctrlspace`	Show available auto-completions
Fold/Unfold sections of code	`optioncmd[` **and** `option cmd]`	`ctrlalt[` **and** `ctrl alt]`	`ctrlalt[` **and** `ctrl alt]`	Fold and Unfold sections of code
Fold/Unfold at a specific indentation level	`cmdk` **then** `cmd(0-9)`	`ctrlk` **then** `ctrl(0-9)`	`ctrlk` **then** `ctrl(0-9)`	Fold/Unfold at a specific indentation level where the number is the

				indentation depth

Various Packages

These are some packages I find useful, and their most useful key bindings. A list of my favorite packages can be found [here](#).

Command	macOS	Windows	Linux	Package
Block Travel up/down	alt↑, alt↓			[Block Travel](#)
Beautify	ctrlaltb			[Beautify](#)
Build Project	cmdaltb	ctrlaltb	ctrlaltb	[Build](#)
Expand Abbreviation	shiftcmde	ctrle	ctrle	[Emmet](#)
Git Plus Menu	shiftcmdh	ctrlshifth	ctrlshifth	[Git Plus](#)
Jumpy	shiftenter			[Jumpy](#)
Minimap Toggle	ctrlk ctrlm			[Minimap](#)
Open File in Browser	ctrlaltm			[Open in Browser](#)
Open Project	ctrlcmdp	altshiftp	ctrlaltshiftp	[Project Manager](#)
Sublime Style Column Selection	altmouse			[Sublime Style Column Selection](#)

apm

apm is Atom's package manager, based on Node's npm tool.

Command	Description
`apm upgrade`	Updates all locally installed packages
`apm upgrade --no-confirm`	Updates all locally installed packages without asking any questions
`apm stars --install`	Installs/updates all packages that you have marked as a favorite (*starred*) in your Atom.io profile

`apm publish minor`	If you're developing your own package, run this in the package's directory to publish a new version of the package, increasing the minor version number by one.
